Company Profile

Two Aspects of Building

The common characteristic of our work is the result of an originally developed theoretical basis. We develop all our designs on this foundation. The individuality of these designs is created through the location and through the programme, by coming to terms with the task. Only when the „Genius Loci“, the spirit of the city, is fully understood, the architecture can develop according to the respective site and programme. This approach to design is the first cornerstone of our architectural concept.

The second cornerstone regarding the realisation of the initial design idea is the constructive detail. The aim of our planning is a combination of creative design and craftsmanship as well as industrial production technologies. We would like to show our respect towards industrial work and craftsmanship through a type of architecture, which makes these achievements visible.

Both aspects - the theoretical background of our work as well as our preference for good detailing- are visible in the buildings designed by us. These are buildings, which agree with our idea of a poetical rationalism.

List of projects

Pergamonmuseum, Museum Island, Berlin, Germany

Architect Prof. O.M. Ungers
 Construction Werkgemeinschaft Pergamonmuseum mbH
 Kleihues + Kleihues, Walter Noebel, BAL
 Client Senatsverwaltung für Stadtentwicklung Berlin
 Realization 2011-2025
 Plan of work Phases 5-9 (HOAI)
 Gross floor area 59,200 sqm
 Building costs 276 million Euros

National Museum of Art, Architecture and Design, Oslo, Norway

Architects Klaus Schuwerk and Jan Kleihues
 Kleihues + Schuwerk
 Client Statsbygg Hovedkontor, Oslo
 Competition 2010, 1st prize
